

TEST YOUR SOIL

To know the soil of your garden, try the test of the “circle”. Take a handful of your soil, put some water on it. Roll it between your hands to form a long bulge.

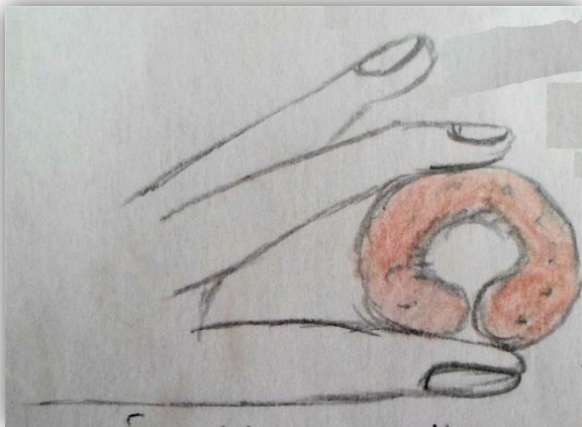

If you can't create a bulge, your soil is full of sand.

Your soil is **light**.

If your bulge is easy to form and you can slightly fold it without breaking it →

Your soil is equally full of **clay** and **sand**.

If you can form a circle with your bulge and it doesn't break, your soil is full of **clay**.

If your hands are yellow, your soil is full of **silt**.
