

Its life cycle

Its end of life

Now	150	250	400
	years	years	years

- A plastic item takes more than 450 years to decompose completely in nature.
- The decomposed plastic leaves dangerous particles in water, air or soil.
- It also can be dangerous for fauna and flora and for human health.

The best thing to do: Reuse if possible, else throw the plastic items in bins or in suitable area.
DO NOT THROW IN
